

eSTEEeM Conference 16th April 2015

Remote laboratories: lessons from the literature

Introduction and Aims

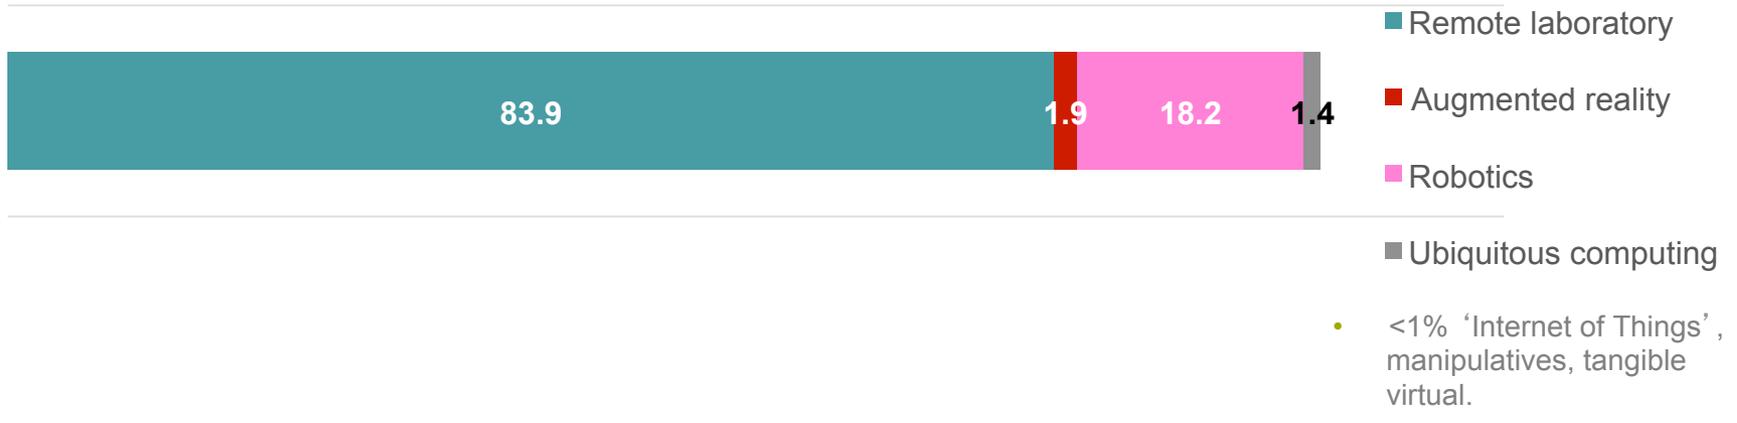

- Project aims: review ‘digital / material hybrid’ systems in learning
- Systematic literature review of ‘state of the art’ :
 - digital/materiality,
 - networks
 - learning

Stage 1

DIGITAL/MATERIALITY SEARCH TERMS

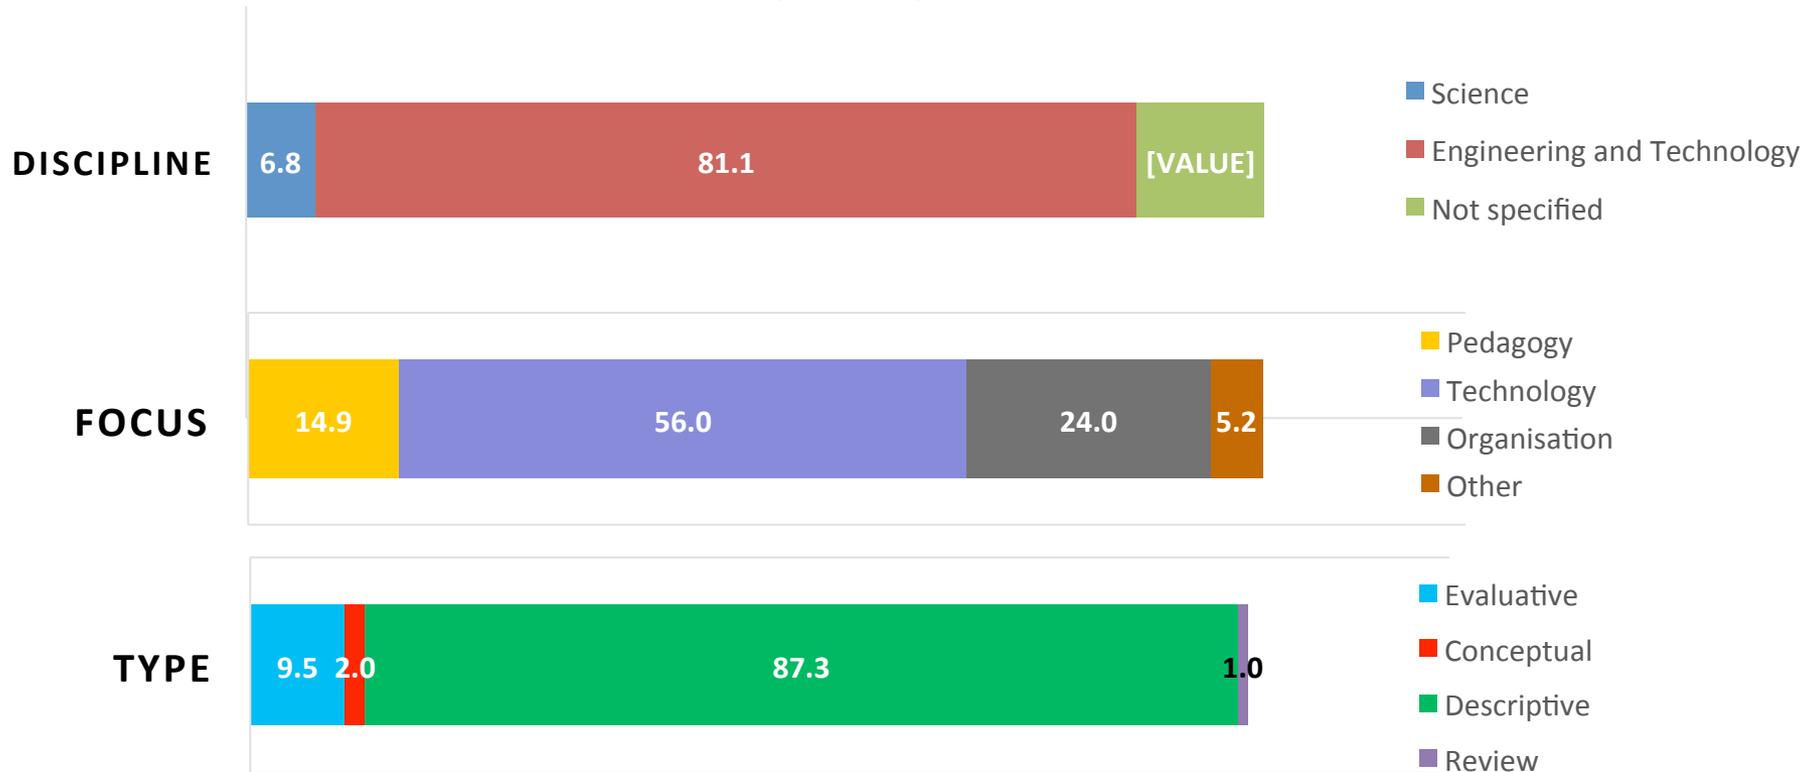

- A lab with one set of experiments for an inverted pendulum and another for coupled water tanks
- RePhys, an example of a hybrid used in biomedical and physiological systems studies with sensors for remote monitoring of blood pressure, heart rate etc along with webcam
- Telecommunications systems labs involving switches and routers
- Webcams and microphones to allow students to observe experiments remotely

Stage 1

**PERCENTAGE OF PAPERS BY DISCIPLINE, FOCUS AND TYPE OF PAPER
(n=808)**

Stage 2

- In-depth text review of a subset of the papers (n=29)
 - remote laboratories
 - evaluative and pedagogical issues
 - review papers

3 themes emerged

1. the importance of real data and authenticity in learning
2. the importance of a sense of presence
3. the locus of control in, and responsiveness of, a hybrid system

1. Real data and authenticity

- possibility of ‘learning from failure’
- ‘real world’ experience of dealing with uncertainty and ‘noise’
- more motivating to have uncertain outcomes than those ‘already known’
- ‘real labs’ have time and space constraints
- remote materiality offers advantages over entirely digital virtual or simulated

2. A sense of presence

- immersion – sense of immediacy and control
- telepresence – sense of being there
- social presence – being there with others
- design – closeness of interface to real world system

3. Locus of control & responsiveness

- active involvement
- who controls the experiment
 - teacher demo, student, batch runs, scheduling
- responsiveness and feedback in a system – bandwidth issue

Conclusions

- Few pedagogical, evaluative studies = the field is still maturing
- Lessons about effective learning through remote laboratories
- New remote laboratories offer a lens with which to view
 - more traditional material pedagogies, e.g. lab-based,
 - and purely digital pedagogies, e.g. virtual labs.
